

Deploy a Continuous Machine Learning Model using Watson Studio.

In this lab, you will be using 2017 Chicago building data to make Chicago a safer place by building a model to predict when buildings are likely to fail inspection. You can then use the model to find which buildings are most dangerous and attend to those first. Continuous learning will be set up to monitor the model performance and adjust if necessary.

Goals:

In this lab you will

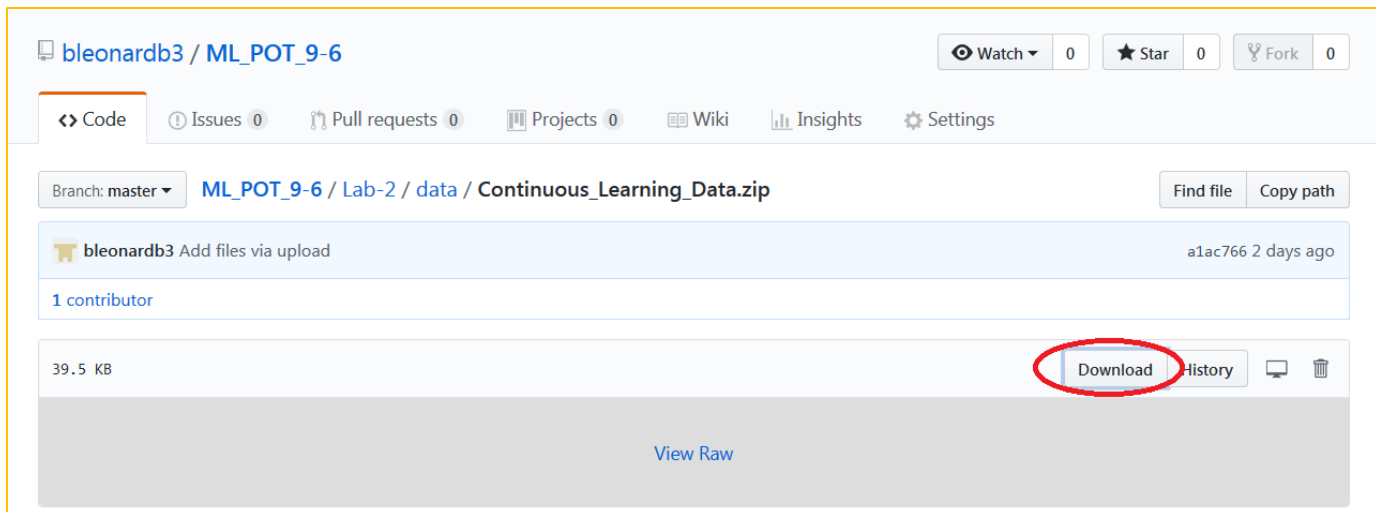

- Upload data to your Watson Studio project.
- Train, compare, and select a machine learning model.
- Set up continuous learning capabilities.
- Deploy a machine learning model.

Exercise Instructions

Step 1 Upload a New Data Asset.

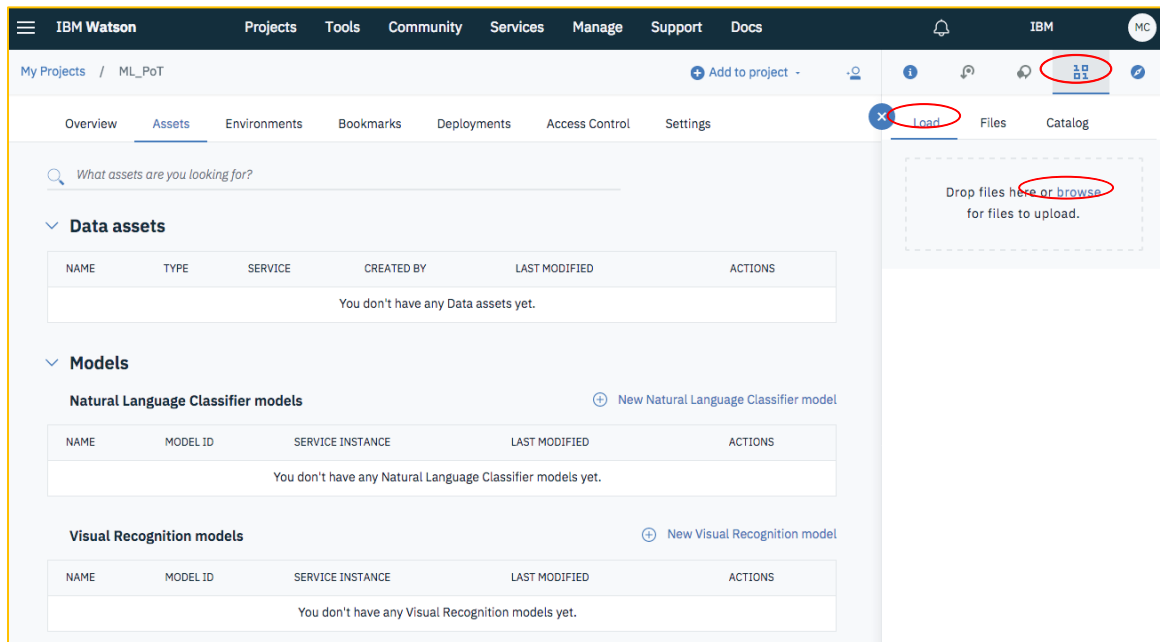

Before we build our models, we need to load data into our project.

1. Click on [Building Data](#)
2. Click on Download.

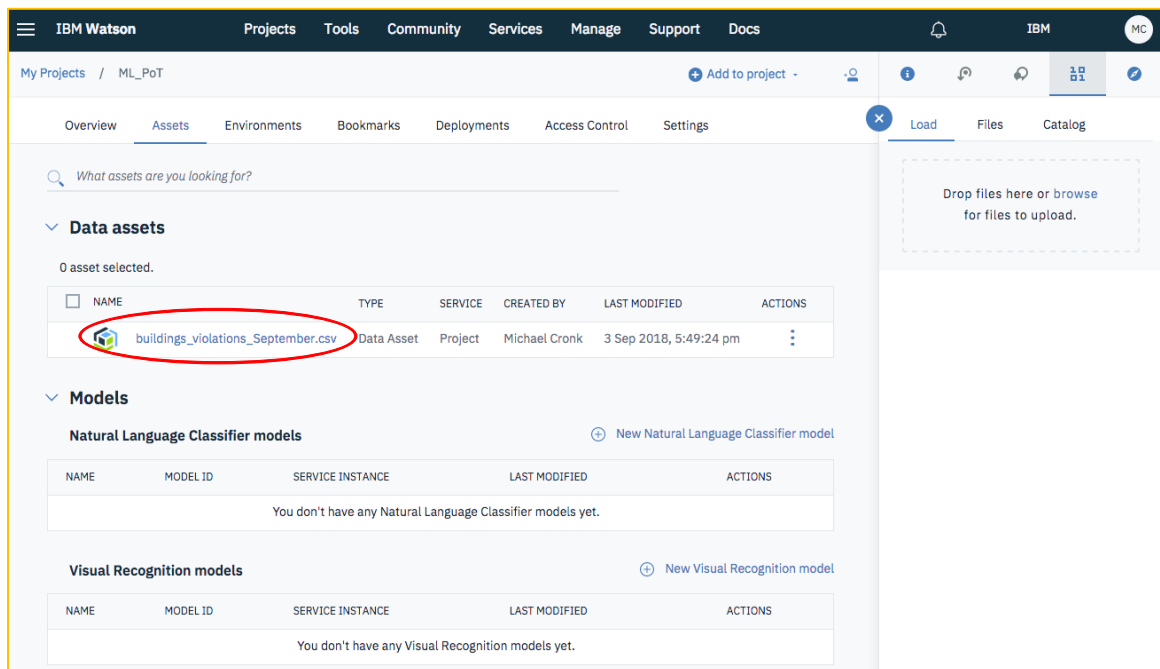

3. Save the zip file to your desktop and unzip the contents. This zip file contains data for building inspections for each month. We will begin by training our model for the month of September and then add October and November data to show how we can continuously adjust over time.
4. Return to your assets page. From Watson Studio, you can click on the Projects dropdown on the top navbar and then click on the name of your project.

5. In the top right of the screen, click the blue icon with 1's and 0's. This will open the data pallet.
6. Click on Load, browse, select the building_violations_September.csv file and click open.

The CSV file should now be listed under “Data assets.” It is now accessible by the Watson Studio modeling tools and applications.

7. Click on building_violations_September.csv under Data assets.

© Copyright IBM Corp. 2018

Course materials may not be reproduced in whole or in part without the prior written permission of IBM

After clicking on building_violations_September.csv, you are brought to a data view. Once you are satisfied that this is the data you want, click on your project name to return to your project's assets.

The screenshot shows the IBM Watson ML PoT interface. The navigation bar at the top includes 'My Projects', 'ML_PoT' (highlighted with a red circle), and 'buildings_violations_September.csv'. Below the navigation bar, there are tabs for 'Preview', 'Profile', and 'Lineage'. The 'Preview' tab is active, showing a table with 7 columns and 20 rows of data. The columns are: INSPECTION_STAT..., VIOLATION_CO..., VIOLATION_STAT..., INSPECTION_CATEGO..., PROPERTY_GRO..., LONGITUDE, and LATITUDE. The data rows show various violation statuses and locations. On the right side, there is a 'Data Asset' panel for 'buildings_violations_September.csv'. It includes a description, tags, and size information. The size is 71.679 KB. At the bottom right, there is a 'Let's talk' button.

Course materials may not be reproduced in whole or in part without the prior
written permission of IBM

2. Enter a Name and a Description. Note that the Machine Learning Service and the Spark Service should already be filled in from the services defined in the prerequisites. Select Manual, and click Create. We are creating a model using “Model builder” but can also create models in notebooks as well as with SPSS or Deep Learning flow modelers.

New model

Define model details

Name
Building_Violations_Chicago_2017

Description
Building violations continuous learning model.

Prepare my data and create a model automatically

Manual
Let me prepare my data and select which models to train

Need something more flexible? Create a notebook or design a Modeler flow

Let's talk

Cancel **Create**

3. You will be brought to a “Select data asset” page. Select building_violations_September.csv as our data asset and click Next.

Select data asset

The model builder currently supports CSV files and IBM Db2 Warehouse on Cloud data assets.

What asset are you looking for?

NAME	TYPE	SERVICE
<input checked="" type="radio"/> buildings_violations_September.csv	Data Asset	Project

Close **Next**

We will now choose which techniques may work well given our data and given our goal to predict which buildings are most likely to not pass inspection.

4. On the “Select a technique” page, click on the Select Label Col dropdown and select `INSPECTION_STATUS`(String).
5. Select Binary Classification. Note that this is often automatically suggested by Watson Studio.
6. Click Add Estimators in the upper right corner of the page.

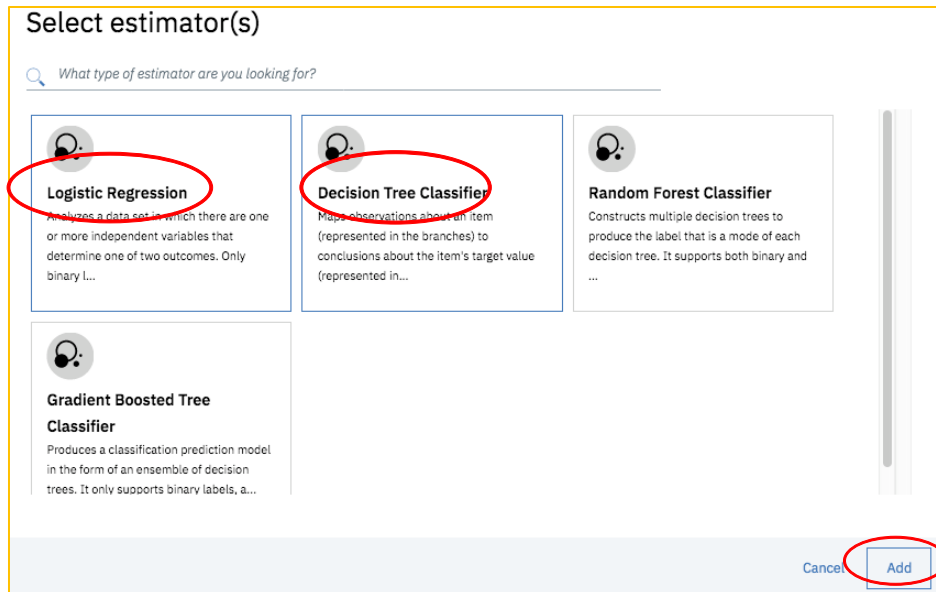

The screenshot displays the IBM Watson Studio interface for selecting a machine learning technique. The top navigation bar includes links for Projects, Tools, Community, Services, Manage, Support, and Docs. The main content area is titled "Select a technique". On the left, a sidebar shows "Select Data" with "Train" and "Evaluate" options. The "Train" option is selected. The "Column value to predict (Label Col)" dropdown is set to "INSPECTION_STATUS (String)". The "Feature columns" dropdown is set to "All (default)". Under the "Suggested technique" section, three options are shown: "Binary Classification", "Multiclass Classification", and "Regression". The "Binary Classification" option is highlighted with a red circle. To the right of the suggestions, the "Add Estimators" button is circled in red. Below the suggestions, a "Validation Split" slider is shown with markers for "Train: 60", "Test: 20", and "Holdout: 20". At the bottom right, there are buttons for "Close", "Previous", and "Next".

© Copyright IBM Corp. 2018

Course materials may not be reproduced in whole or in part without the prior written permission of IBM

Watson Studio only presents the estimators that would work with our selections on the previous page.

7. Select Logistic Regression and Decision Tree Classifier.
8. Click Add.

9. Back on the “Select a technique” page, click Next.

Select a technique

You cannot change label column, feature columns, model type, or validation split after adding an estimator. You must first delete all estimators in order to make changes to these attributes.

Column value to predict (Label Col)
INSPECTION_STATUS (String)

Feature columns
All (default)

Suggested technique.

- Binary Classification**
Classify new data into defined categories based on existing data. Choose if your label column contains two distinct categories.
- Multiclass Classification**
Classify new data into defined categories based on existing data. Choose if your label column contains a discrete number of categories.
- Regression**
Predict values from a continuous set of values. Choose if your label column contains a large number of values.

Validation Split
Train: 60 Test: 20 Holdout: 20

Configured estimators

Step 3 Set up Continuous Learning Model Capabilities

Model performance is critical for solving data science problems. This page provides information and functionality to aid in continuous training, tuning, and redeployment. We will now set up parameters to automatically retrain our model when performance falls below a certain threshold.

1. Click on Configure Performance Monitoring.

The screenshot shows the IBM Watson ML interface for a project named 'Building_Violations_Chicago_2017'. The 'Evaluation' tab is selected, showing the 'Last Evaluation Result' table and the 'Performance Monitoring' section. The 'Configure Performance Monitoring' link is circled in red.

Version	2456f175-bee0-421a-901a-b414d4b61534
Phase	setup
AreaUnderPR	0.902
AreaUnderROC	0.989

Performance Monitoring

Configure performance monitoring to evaluate and retrain the model periodically to ensure the model performance is acceptable. You will need an existing IBM Db2 Warehouse on Cloud connection associated with your project to be used as your feedback data connection.

[Configure Performance Monitoring](#)

Versions

TIME	VERSION	DEPLOYED	ACTIONS

11. Click on your DB2 Warehouse-xx name.
12. Select the schema that matches DASH####.
13. Click select.

The screenshot shows the IBM Watson interface with the 'Select feedback data reference' dialog. The dialog has three columns: 'ML_PoT', 'Db2 Warehouse Connection', and 'DASH11054'. The 'ML_PoT' column has a dropdown menu with 'Connections (1)' selected. The 'Db2 Warehouse Connection' column has a dropdown menu with 'DASH11054' selected. The 'DASH11054' column has a dropdown menu with 'Schemas (13)' selected. The 'Schemas (13)' dropdown menu is open, showing a list of schemas: ERRORSHEMA, GOSALES, GOSALESBW, GOSALESHR, GOSALESMR, GOSALESRT, IBM_RTMON_DATA, NULLIDR1, NULLIDRA, SAMPLES, ST_INFORMTN_SCHEMA, and TEST. The 'DASH11054' schema is highlighted. At the bottom right, there are three buttons: 'Cancel', 'Select', and 'Let's talk'. The 'Select' button is circled in red.

ML_PoT	Db2 Warehouse Connection	DASH11054
Connections (1)	Schemas (13)	
Db2 Warehouse Connection	DASH11054	
	ERRORSCHEMA	No drilldowns currently exist.
	GOSALES	
	GOSALESBW	
	GOSALESHR	
	GOSALESMR	
	GOSALESRT	
	IBM_RTMON_DATA	
	NULLIDR1	
	NULLIDRA	
	SAMPLES	
	ST_INFORMTN_SCHEMA	
	TEST	

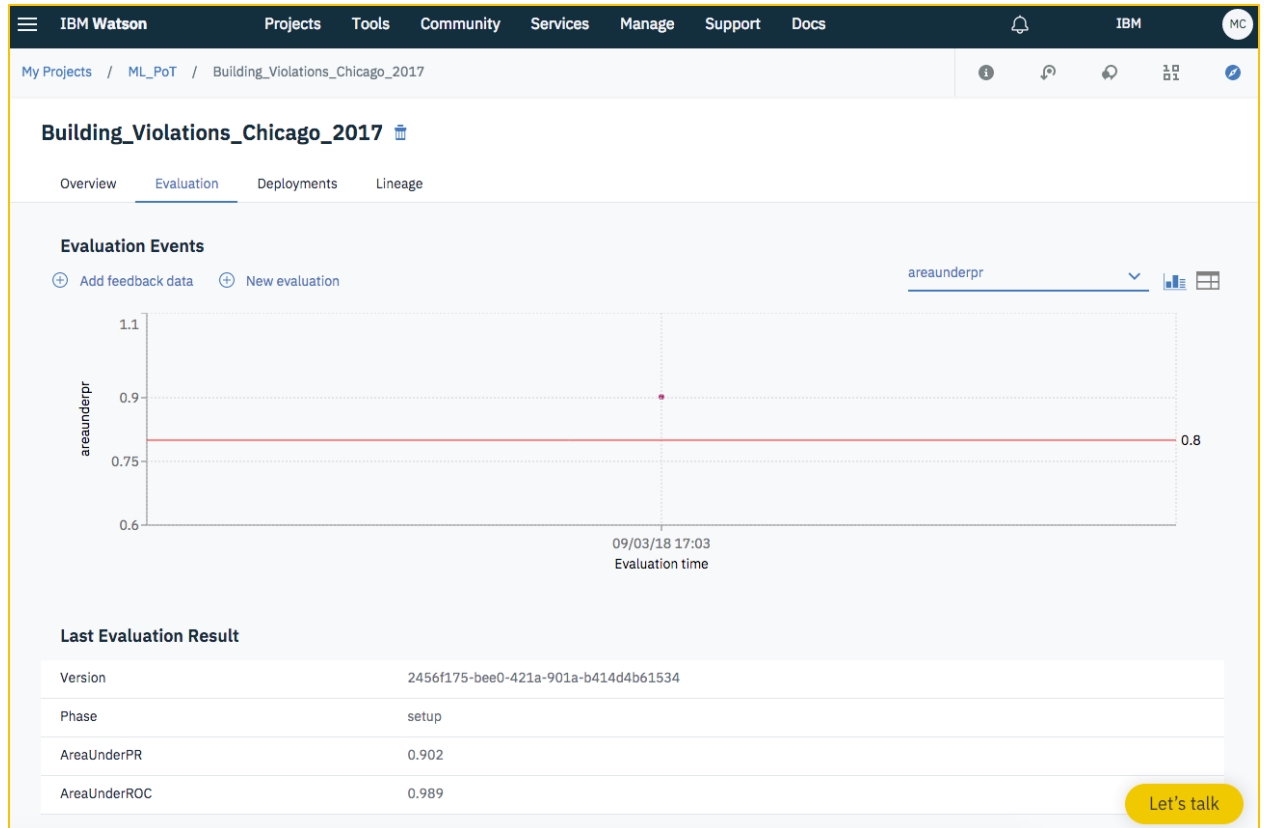

14. After returning to the “Configure performance monitoring” page, enter a unique table name (attendees are sharing the DB2 Warehouse service so make your name unique by appending your initials to the table name).
15. Enter 500 as the Record count.
16. Under Auto deploy, select never.
17. Click Save.

The screenshot shows the 'Configure performance monitoring' page in the IBM Watson interface. The page has a dark blue header with navigation links: IBM Watson, Projects, Tools, Community, Services, Manage, Support, Docs, and a user profile icon (MC). The main content area is white and contains the following sections:

- Spark Service or Environment**: Only Spark environments supporting Scala kernels can be used for continuous learning. The dropdown menu shows 'spark-nn'.
- Prediction type**: The dropdown menu shows 'binary'.
- Metric details (type / optional threshold)**: The dropdown menu shows 'areaUnderPR' and the threshold is '0.8'.
- Feedback data connection** (IBM Db2 Warehouse on Cloud - [Create new connection](#)): The dropdown menu shows 'dashdb: BLUDB' and 'New2017Table' (highlighted with a red circle).
- Record count required for re-evaluation**: The input field shows '500' (highlighted with a red circle).
- Auto retrain**: The dropdown menu shows 'when model performance is below threshold'.
- Auto deploy**: The dropdown menu shows 'never' (highlighted with a red circle).

At the bottom right, there are three buttons: 'Cancel', 'Save' (highlighted with a red circle), and 'Let's talk'.

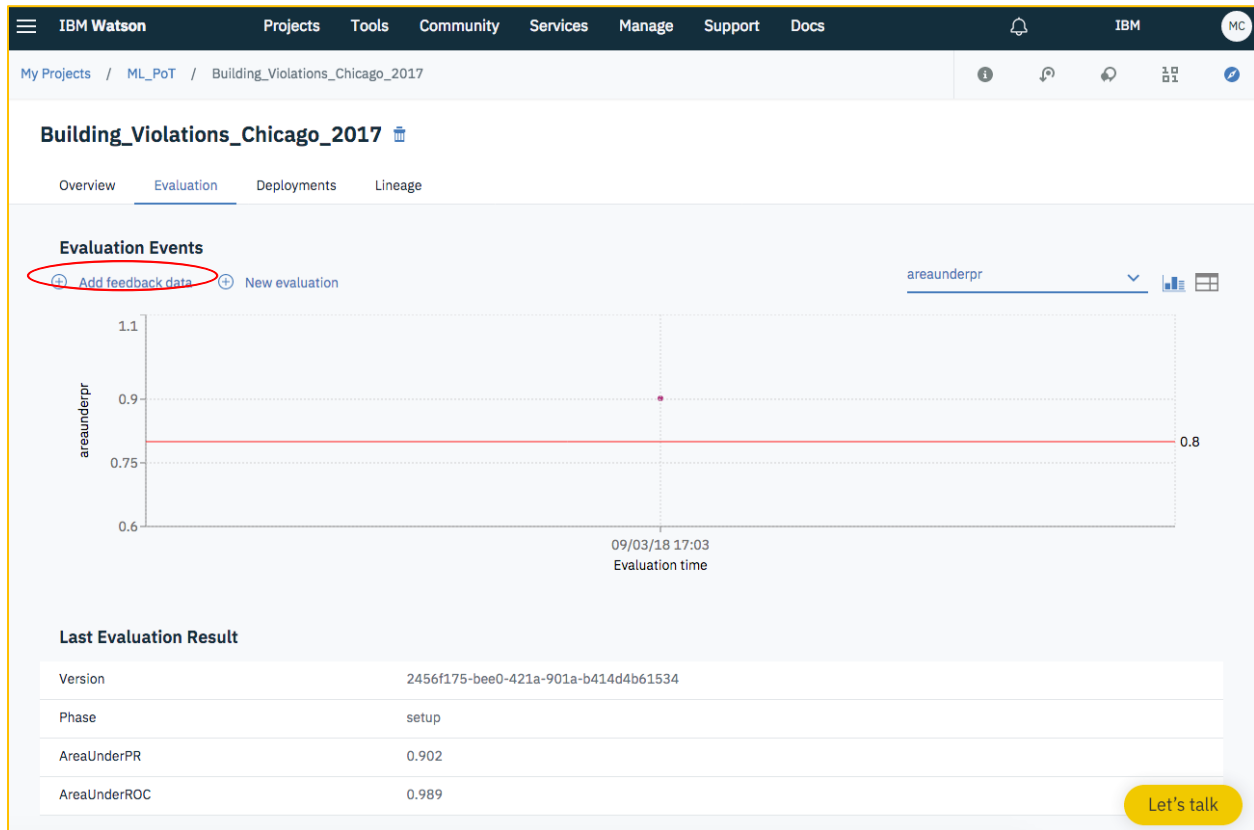

We have just set our model to retrain whenever its performance falls below 0.8. The evaluation screen has changed to reflect the decisions we have just made. Notice the graph lists our current areaunderPR and the threshold we have set. Clicking on Add feedback data will upload a new dataset. Clicking on new evaluation will then evaluate the model and check to see how the model compares to our 0.8 threshold.

Suppose September has passed, and we now have October data. We can trigger a new evaluation by adding more feedback data.

18. Click Add feedback data.

19. Select building_violations_October.csv.

© Copyright IBM Corp. 2018

Course materials may not be reproduced in whole or in part without the prior written permission of IBM

20. When the “New evaluation” window appears, click New Evaluation. Re-evaluating the model may take a few minutes. This is a great time to grab coffee.

Notice that the October data has caused our model to fall below the 0.8 threshold and a new version has been trained. Although we run through these steps graphically, you can also configure a Watson Machine Learning continuous learning model entirely through APIs.

You can continue by adding the November data by the same process of hitting **Add feedback data** and adding more files. If you scroll down you will be able to see all model versions listed. We have three versions, but no deployments.

You are automatically brought to the Overview tab lists information related to the model deployment including services used and version number.

8. Click the Implementation tab.

The screenshot shows the IBM Watson ML console interface. The top navigation bar includes 'IBM Watson', 'Projects', 'Tools', 'Community', 'Services', 'Manage', 'Support', 'Docs', a notification bell, 'IBM', and a user profile icon 'MC'. The breadcrumb trail is 'My Projects / ML_PoT / Building_Violations_Chicago_2017 / ChicagoOnline'. The main header is 'ChicagoOnline'. Below it are three tabs: 'Overview', 'Implementation' (which is circled in red), and 'Test'. The 'Implementation' tab displays two sections: 'Deployment' and 'Model'. The 'Deployment' section contains a table with the following data:

Name	ChicagoOnline
Type	Web Service
Deployment ID	5d232eda-13b3-440f-8e13-de9ee1ea2187
Status	DEPLOY_SUCCESS
Asset type	model
Asset name	Building_Violations_Chicago_2017
Machine learning service	pm-20-pw
Created	03 Sep 2018 05:38pm
Last modified	03 Sep 2018 05:39pm

The 'Model' section contains a table with the following data:

Name	Building_Violations_Chicago_2017
ID	ffa1749a-c5e3-49e6-91fe-212b16e97dfb
Version ID	2456f175-bee0-421a-901a-b414d4b61534

A yellow 'Let's talk' button is located in the bottom right corner of the console area.

The implementation tab provides developers information to help minimize the time it takes to develop models and place them in a production environment.

9. Click on the Test tab.

The screenshot shows the IBM Watson ChicagoOnline interface. The top navigation bar includes 'IBM Watson', 'Projects', 'Tools', 'Community', 'Services', 'Manage', 'Support', and 'Docs'. Below this, a breadcrumb trail reads 'My Projects / ML_PoT / Building_Violations_Chicago_2017 / ChicagoOnline'. The main content area is titled 'ChicagoOnline' and has three tabs: 'Overview', 'Implementation', and 'Test'. The 'Test' tab is circled in red. Below the tabs, the 'Implementation' section is active, displaying a table with API details and a 'Code Snippets' section with a cURL tab selected.

Let's talk

During this lab we have very quickly compared various machine learning models and chosen the best one tuned to our dataset and objectives. We then created a continuous machine learning model that automatically monitors and retrains allowing Watson Machine Learning to keep applications, data pipelines, or external systems relying on the machine learning model as up to date as possible.
